Falling Down on the Job

SAFETY • COMFORT • EASE

SAFETY

According to OSHA 3625-02R, falls are the leading cause of fatalities in construction, falls from ladders make up nearly a third of those fatalities.

Two OSHA recommendations to improve safety are:

- Maintain three points of contact with the ladder at all times
- Do not carry any tool or materials in your hands when climbing a ladder

PRODUCTIVITY

Jobs requiring the need to carry gas cylinders showed a 5-10 minute improvement in productivity when using a refrigerant strap by saving trips to and from the service van and the job site.
